

# 2001 Annual Data Report

2001 Profile of:

- Applications
- New Enrollments
  - Students
  - Graduates

1991-2001 Trends

## INTRODUCTION

Schools of public health have been educating professionals in the techniques of health preservation and disease prevention and control since the first decades of the twentieth century. Some schools of public health had their beginnings in university schools of medicine; others were conceived from the outset as autonomous units within their parent institutions. In Fall 2001, there were 29 accredited schools of public health in the United States, at 10 private and 19 public universities. All 29 schools have been included in this data report.

Unlike other health professional schools which emphasize a specific clinical discipline (for example medicine or nursing), schools of public health educate a wide range of professionals, from biostatisticians and epidemiologists to health administrators, community health educators and specialists in areas such as managed care, environmental sciences, international health and the behavioral and social sciences.

The Association of Schools of Public Health (ASPH) is the only national organization representing the deans, faculty, and students of this Nation's 29 accredited schools of public health in the United States and Puerto Rico. The schools educate over 16,000 students annually from every state in the US and most countries throughout the world. The schools of public health are the primary educational system that train personnel needed to operate public health, disease prevention and health promotion programs in the US. ASPH's principal purpose is to promote and improve the education and training of professional public health personnel.

ASPH collects and compiles aggregate data on applications, new enrollments, students and graduates in each school of public health. The information collected serves the schools and various federal, state and local agencies and private institutions in planning and implementing their respective public health training, research and service activities.

ASPH thanks the deans, faculty and staff of the schools of public health who made this data report possible. In particular, we thank Dean Mark Becker (Minnesota), David Carnahan (UT-Houston), Ian Greaves (Minnesota) Stanley Hudson (Harvard), Mike Kalasinski (Michigan), Dzidra Knecht (BU), Rebecca Mabe (UNC-Chapel Hill), Michael O'Connor (Columbia), and Joe Weisenburger (Minnesota).

## NOTES ON DATA

### DATA COLLECTION

ASPH collects information from the 29 accredited schools of public health. This report presents data on applications, new enrollments and students for the fall semester or term of the current academic year (fall 2001 for this report). Data on graduates cover the entire academic year (2000-01 for this report).

### DEGREES

The following categories are used:

MPH	Master of Public Health
MS	Master of Science
MSPH	Master of Science in Public Health
MHA/MHSA	Master of Health (Hospital) Administration/Master of Health Services Administration
OTHER MAST	All other masters degrees
DrPH	Doctor of Public Health
ScD	Doctor of Science
PhD	Doctor of Philosophy
OTHER DOCT	All other doctorate degrees
JOINT DEGREE	All joint degrees which combine a school of public health degree with an outside degree, such as the following:

- MD - Doctor of Medicine
- DDS-Doctor of Dental Medicine
- JD - Juris Doctorate
- PhD - Doctor of Philosophy
- MA - Master of Arts
- MS - Master of Science
- MN/MSN - Master of Nursing
- MBA - Master of Business Administration
- MPA - Master of Public Administration
- MPP- Master of Public Policy
- MSW - Master of Social Work
- PA- Physician Assistant

## PROGRAM AREAS

The following categories are Used:

BIOSTAT	Biostatistics, biometry
EPID	Epidemiology (at schools where epidemiology and biostatistics programs are combined, data are recorded under epidemiology)
HSA	Health services administration, hospital administration, health policy, health planning, health management, health services research, health law, evaluation research
PHP&PM	Public health practice and program management, gerontology, dental public health, public health nursing, public health social work, veterinary public health, mental health
H.EDUC/BS	Health education, behavioral sciences, public health education, health education administration, health behavior, community health sciences, community health practice, health promotion
ENV SC	Environmental sciences, environmental health, toxicology, radiological health, environmental chemistry, water quality, environmental health planning, occupational safety and health, industrial hygiene, occupational medicine, aerospace medicine
INT HLTH	International health, tropical medicine
MCH	Maternal and child health, women's health, adolescent health, infant and child health
NUTR	Nutrition, public health nutrition
BIOMED	Biomedical and laboratory sciences, microbiology, parasitology, immunology, cancer biology, biochemistry, pathobiology
OTHER	All other areas of specialization including general public health studies, urban health, disease control, genetics, clinical research analysis, forensic science

The classification system for program areas was developed by the ASPH Data Advisory Committee in 1978 and has been used since the 1979-80 academic year. The system undergoes periodic review and revision by the Committee, with the approval of other appropriate committees and/or councils.

The ASPH Data Advisory Committee met in 1994 to review the data categories. The resulting changes in the classification system are reflected in this data report. International Health (INT HLTH) and Maternal & Child Health (MCH) were added as program area categories. Previously, those students were classified in the category of Public Health Practice & Program Management (PHP&PM). The category Occupational

Safety & Health (OS&H) was deleted. Those students are now included in the category of Environmental Sciences (ENV SC).

Under the ASPH data collection system, the schools report their applicants, students and graduates by the program area categories described on the previous page. Categorization is not always precise and there is some variance each year due to reclassification. In addition, a number of schools have program areas that include two or more of the ASPH categories. Finally, program areas within the schools are reorganized from time to time with the result that two or more areas that were once separate in the ASPH classification system are later reported as a combined area. For these reasons, the data on program area should be viewed with caution.

Lastly, a number of schools allow dual specializations. Applicants, students and graduates with dual specializations are recorded as ".5" in each area.

### **STUDENT STATUS**

The following categories are used:

F-T	An on-campus student registered for nine or more credit hours per quarter or semester
P-T	An on-campus student registered for less than nine credit hours per quarter or semester
OTHER	A student enrolled in a non-traditional program including extended degree and other non-traditional programs offered by a school of public health at the main campus or at other sites
UNKNOWN	Status is unknown

## HIGHLIGHTS AND TRENDS

In 2000-01, 29 accredited schools of public health existed in the United States, up from 24 accredited schools of public health in 1988/89. The highlights and trends in this report represent the data collected from these schools, which are accredited by the Council of Education for Public Health (CEPH). All ASPH member schools reported data for the years 2000-01.

### APPLICATIONS

#### Fall 2001

ASPH collects data on applications rather than individuals. ASPH does not have a centralized application process, and cannot determine the average number of applications submitted per applicant.

In the Fall 2001, there were 20,246.5 applications submitted, a 1.4 percent increase from 2000 (19,960). Submissions from female applicants constituted 68.5 percent of total applications and foreign nationals constituted 29.9 percent of total applications [Table 1-1].

Of total US applicants, 38.5 percent were members of minority groups (Asian, 16.6 percent; Black, 13.6 percent; Hispanic, 7.8 percent; American Indian/Alaskan Native, 0.6 percent) [Table 1-2].

Program areas with the highest number of applications were for epidemiology (20.8 percent), health services administration (17.2 percent), health education/behavioral sciences (15.7 percent) and international health (9.5 percent) [Table 1-5].

Of the total applications in 2001, approximately 60.5 percent were accepted, slightly higher than last year (58.6 percent) [Table 1-6]. New enrollments represented slightly less than half of acceptances and 29.1 percent of applicants.

Acceptance rates were higher for females (61.5 percent) than males (58.4 percent), lower for foreign nationals (49.1 percent) than for US citizens (65.5 percent), and lower for minorities (59.0 percent) than for whites (71.8 percent) [Table 1-7]. The program areas with the highest acceptance rates were international health with a rate of 67.0 percent, environmental health and health education/behavioral sciences were tied at 64.6 percent, followed by nutrition at 63.2 percent. The program area with the lowest acceptance rate was biomedical sciences with a rate of 49.6 percent.

### APPLICATION TRENDS

#### 1991 - 2001

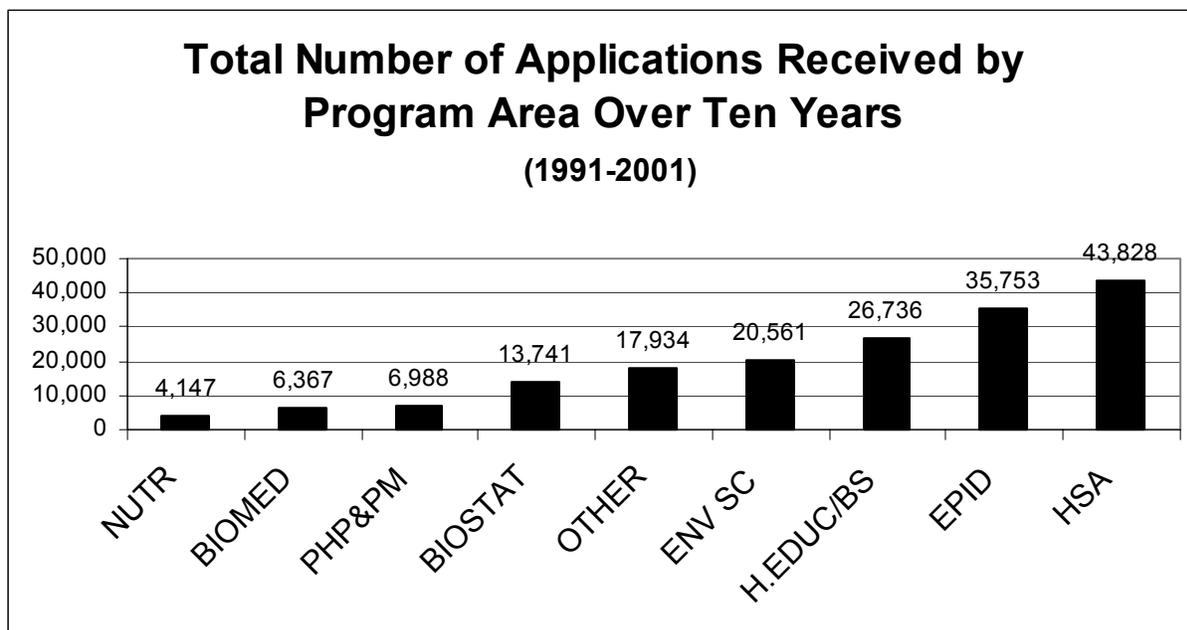

For the last decade, the total number of applications reported by the schools of public health has been steadily increasing despite a slight dip in applications last year. Since

1991, applications have increased by 55 percent from 13,066 to 20,246.5 applications [Table 1-8].

Over the past ten years, females have consistently applied to schools of public health in greater numbers than males. In 1991, 59.6 percent of applications were submitted by females. In 2001, the number of female applicants rose to 68.5 percent. Since 1991, the number of female applicants has increased by 80.5 percent compared with a 22.7 percent increase in the number of male applicants.

Since 1991, the number of applications received from US members of minority groups increased at a rate higher than overall applications (119.4 percent increase for minority applicants compared with a 51.5 percent overall application increase of US citizens). The minority groups that experienced the most growth over the past decade were Asians and Blacks.

The program areas that comprise the largest proportions of applications (health services administration, biostatistics, epidemiology, and health education/behavioral sciences) have remained stable for the past 10 years [Table 1-9].

### NEW ENROLLMENTS

#### Fall 2001

In Fall 2001, there were 5,895.0 new enrollments representing 35.9 percent of the total enrollments in the schools [Table 2-5]. In 2000, there were 5,839.5 new enrollments representing 36.5 percent of total enrollments.

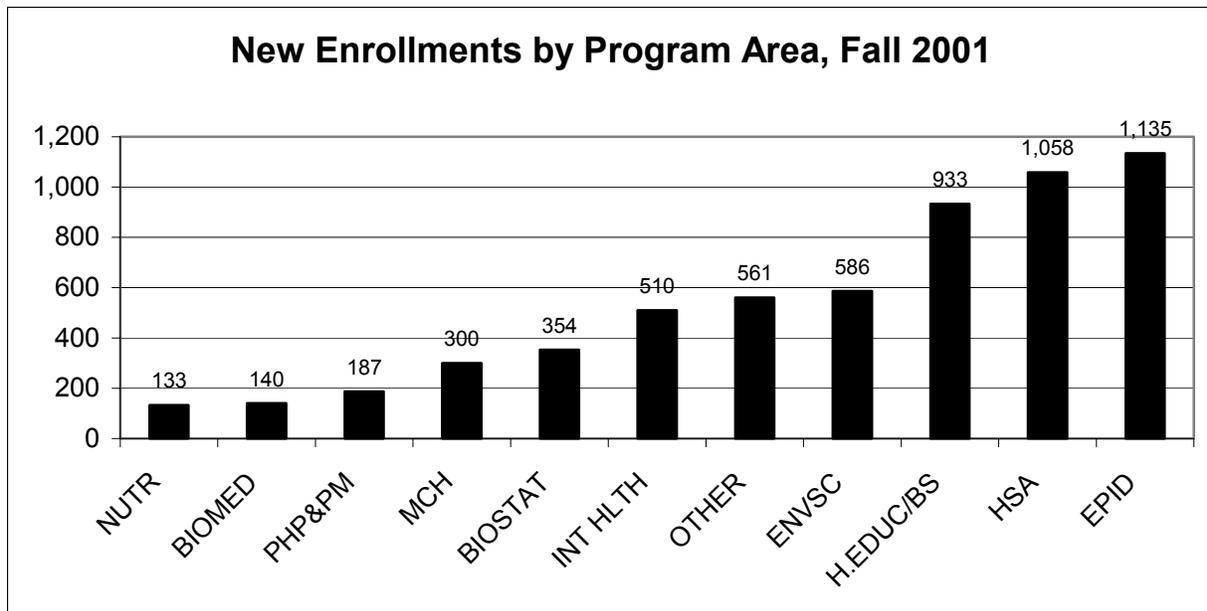

The proportion of new female students was 68.5 percent, while foreign students represented 21.0 percent of new enrollments [Table 2-1]. These proportions are similar

to the total student enrollment for females (68.2 percent) and foreign nationals (18.1 percent) [Table 3-1].

The number and proportion of new minority students has increased from 2001 by nearly 4 percent. In 2001, 1,653.5 or 35.6 percent of US new enrollments were minorities, up from 1,593.5 or 33.6 percent of US new enrollments in 2000 [Table 2-2].

In 2001, the program areas with the largest concentrations of new enrollments were epidemiology (1,134.5 or 19.2 percent), health services administration (1,058 or 17.9 percent), and health education/behavioral sciences (933.0 or 15.8 percent) [Table 2-3].

Trends for schools of public health for the past 10 years, indicate that percentage of new enrollments as a percentage of acceptances and as a percentage of applications have been decreasing, although there were slight increases in 2000 and 2001 [Table 2-6].

## STUDENTS

### Fall 2001

There were 16,414 students enrolled in the schools in 2001, a 2.5 percent increase from last year (16,018.5) [Table 3-10]. Of this total, 68.2 percent were female and 18.1 percent were foreign nationals [Table 3-1].

Of the US students, 4,397.0 or 34.3 percent were members of minority groups (Asian, 13.0 percent; Black, 11.0 percent; Hispanic, 9.6 percent; American Indian/Alaskan Native, 0.7 percent) [Table 3-2]. Minority enrollment increased by 7.9 percent from last year (4,073.5 were members of a minority group in 2000) [Table 3-11].

In 2001, half of the students (49.6 percent) were enrolled in MPH programs and 75.2 percent of the students were enrolled in master's degree programs [Table 3-4]. The remaining 24.8 percent of the students were enrolled in doctoral degree programs. A slightly higher proportion of males (26.4 percent) pursue doctorates than females (24.0 percent), and a higher proportion of foreign national students (35.6 percent) pursue doctorates than US students (22.4 percent) [Table 3-3]. Of the students that were US citizens; 25.6 percent of white students were pursuing doctorates compared with 20.9 percent of American Indian/Alaskan Native students, 18.1 percent of Black students, 17.6 percent of Asian students, followed by 12.2 percent of Hispanic students.

There were some differences in program areas based on demographic characteristics. Females represented more than double the percentage of males enrolled in health education/behavioral sciences (17.0 percent female vs. 7.2 percent male) and maternal and child health (5.3 percent female vs. 1.7 percent male) [Table 3-5]. Males represented almost double the percentage of females enrolled in environmental sciences (15.3 percent male vs. 8.8 percent female). Foreign nationals represented more than double the percentage of US citizens enrolled in biostatistics (17.7 percent foreign nationals vs. 6.8 percent US citizens) and almost double the percentage of those students enrolled in international health (10.1 percent foreign nationals vs. 6.1 percent US citizens).

Half (50.0 percent) of the students were enrolled in three program areas; epidemiology (19.2 percent), health services administration (16.9 percent), and health education/behavioral sciences (13.9 percent) [Table 3-6].

The program areas with the largest proportion of doctoral students were biomedical sciences (65.2 percent), biostatistics (41.2 percent), followed by epidemiology (32.3 percent) [Table 3-7].

In 2001, 29.0 percent of the students were part-time [Table 3-8]. The proportion of part-time students varied greatly among the schools.

## STUDENT TRENDS

### 1991 - 2001

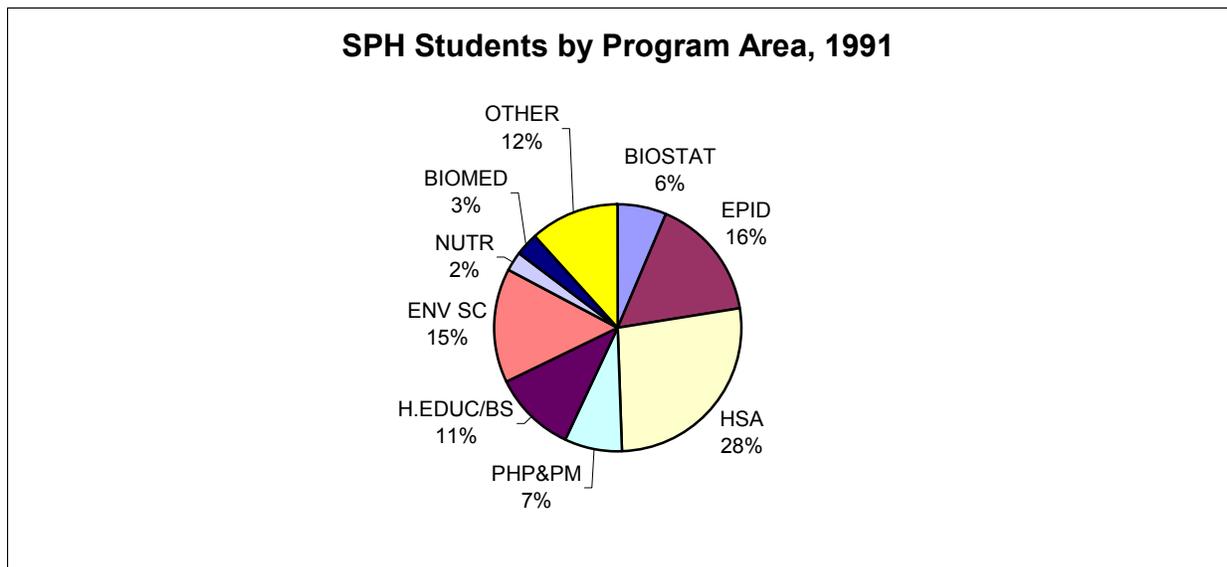

In 2001, there were 16,414 students enrolled in the schools of public health and in 1991 there were 12,032 students enrolled; a 36.4 percent increase [Table 3-10].

In 2001, female students represented 68.2 percent of total enrollments. This representation has been constant over the past decade, but the number of female enrollees has increased 48.2 percent since 1991 compared with a 16.5 percent increase of male enrollees. In 2001, foreign nationals constituted 18.1 percent of the total student body—the largest percentage in recent history.

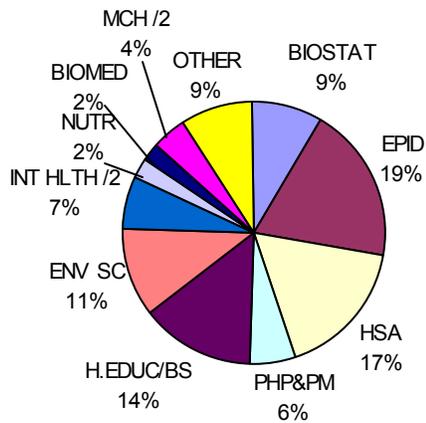

Total minority enrollment has more than doubled from 2,119 students in 1991 to 4,397 students in 2001 [Table 3-11]. Minority students constituted 21.8 percent of US students in 1991 compared with 34.3 percent in 2001. The minority groups that experienced the largest growth over the past decade were Asians (208.1 percent), followed by Blacks (99.9).

With regard to degree objective, there has been very little change since 1991. In 2001, nearly half (49.6 percent) of the students were enrolled in MPH programs, 75.2 percent of enrolled students were in master's degree programs and 24.8 percent in doctoral degree programs [Table 3-4]. In 1991, 50.7 percent of the students were enrolled in MPH programs, 74.7 percent were enrolled in master's degree programs, and 24 percent were enrolled in doctoral degree programs [Table 3-12].

For the past ten years, the program areas that comprise the largest proportions of students (epidemiology, health services administration, health education/behavioral sciences, and environmental sciences) have remained constant though the proportions have fluctuated in the various program areas [Table 3-13].

### SPH Students by Program Area, 2001

### GRADUATES

#### 2000-01

There were 5,746.5 graduates in 2000-01, a 2.2 percent decrease from 1998-99 (5,878.5) [Table 4-1]. In 2000-01, females represented 67.3 percent of total graduates and foreign nationals constituted 16.2 percent of total graduates. These percentages are consistent with total student enrollment.

In 2000-01, minorities received 33.3 percent of degrees awarded to US students (Asian, 15.9 percent; Black, 10.1 percent; Hispanic, 6.8 percent; American Indian/Alaskan Native, 0.6 percent) [Table 4-2]. 1999-2000 data indicated that minorities received 31.9 percent of degrees awarded to US students.

In 2000-01, the MPH degree was awarded to 62.5 percent of the total degree recipients and 90.0 percent of total degree recipients were awarded masters degrees [Table 4-4]. Doctoral degrees were awarded to 575.0 individuals or 10.0 percent of the total degree recipients. The highest proportion of doctoral degree recipients was awarded the PhD (7.3 percent) followed by the DrPH (1.8 percent). A higher proportion of males (11.6 percent) than females (9.2 percent) received doctoral degrees, and a higher proportion of foreign nationals (16.5 percent) than US citizens (8.8 percent) were awarded doctoral degrees [Table 4-3].

Overall, the program areas with the highest concentrations of graduates were health services administration (19.8 percent), epidemiology (17.3 percent), and health education/behavioral sciences (13.2 percent) [Table 4-7]. The program areas with the highest concentrations of doctoral degree recipients were biomedical laboratory sciences (47.1 percent), biostatistics (16.9 percent), followed by nutrition (15.7 percent) [Table 4-5].

## GRADUATE TRENDS

### 1991 - 2001

In 2000-01, there were 5,746.5 graduates from the schools of public health, a 43.8 percent increase from 1991 (3,995 graduates in 1990-91) [Table 4-8]. The number and proportion of female graduates continues to increase. In 1991, female graduates totaled 2,457 or 62 percent compared with 3,866.5 or 67.3 percent in 2001. Female graduates have increased 57.4 percent since 1991 compared with a 24.8 percent increase in male graduates. US graduates have increased by 51.1 percent since 1991 compared with a 14.1 percent increase in foreign national graduates.

Overall, the number of minority graduates has increased 134.8 percent since 1991. Asians increased by 319 percent; Blacks increased by 124.4 percent; and Hispanics increased 31.1 percent. Between 2000-01 and 1990-91, American Indian/Alaskan Native graduates decreased by 20.6 percent [Table 4-9]. In 2001, the proportion of minority graduates was 33.3 percent of total US graduates, up from 1991 when the proportion of minority graduates was 22.1 percent of total US graduates.

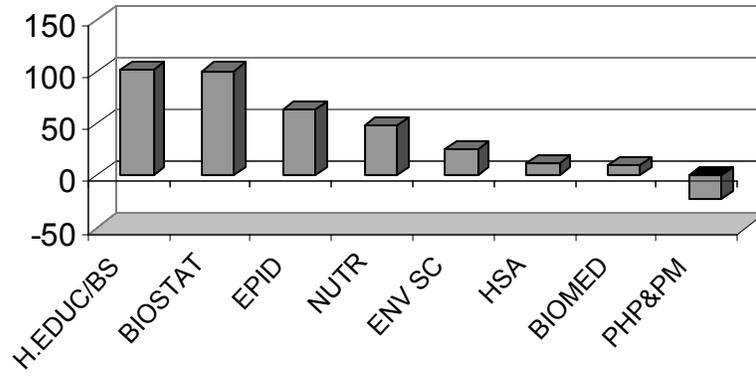

Since 1991, the proportion of graduates with prior MD degrees has decreased from 20.0 percent to 16.3 percent in 2001 [Table 4-9]. In 2001, US citizens comprised 63.7 percent of graduates with prior MD degrees and foreign nationals comprised the remaining 36.3 percent.

The MPH has remained the most commonly awarded degree over the past decade [Table 4-10]. It accounted for 62.5 percent of the total degrees awarded in 2000-01. The MS degree represented 11.7 percent of total; MHA/MHSA degree represented 5.4 percent of total degrees; and the MSPH degree at 2.9 percent of total degrees. Since 1991, proportions of degrees awarded have been constant.

In 2001, the PhD degree was the most awarded doctoral degree and has been for over ten years. This degree accounted for 7.3 percent of total degrees awarded; DrPH degrees represented 1.8 percent of total degrees, followed by the ScD degree at 0.8 percent of total degrees awarded.

Concentrations of graduates in the different program areas have been constant since 1991, with the exception of public health practice/program management [Table 4-11]. The program areas that have grown most significantly in terms of the proportion of graduates since 1991 were health education/behavioral science (increase of 101.6 percent) and biostatistics (increase of 100.6). International health, which has only been tracked from 1993-94, increased by 99.4 percent. Numbers of public health practice/program management graduates decreased by 23 percent over this ten-year time frame.

### Program Areas with the Largest Growth (Percent Increases of Graduates Between 1991 & 2001)

/1International Health (INT HLTH) and Maternal & Child Health (MCH) became program area categories in 1994.

\* As of 1994, Occupational Safety & Health (OSH) is no longer a program area category. Those students are now classified as Environmental Sciences (ENV SC).

\*\* As of 1995, information is no longer collected on non-degree seeking students.
